Faunistic, new record, Coleoptera, Bostrichidae, Ptinidae, Palaearctic Region, Albania, Czech Republic, Morocco, Slovakia

Abstract. Six new records from superfamily Bostrichoidea are presented from the Palaearctic Region. Three species are mentioned from the Czech Republic - two from the family Bostrichidae - *Heterobostrychus brunneus* (Murray, 1867), a record new to Czech Republic, and *Sinoxylon anale* Lesne, 1897, a record new to Moravia (Czech Republic). The last of them is from the family Ptinidae - *Tricorynus tabaci* (Guérin-Méneville, 1850), confirmed data from Czech Republic, Bohemia and a species new to Slovakia. Other two new records are from the family Ptinidae - *Homophthalmus rugicollis* (Mulsant et Rey, 1853) and *Ernobius abietis* (Fabricius, 1792), both are new to Albania. The last record is also from the family Ptinidae, and is new to Morocco - *Stagetus pilula* (Aubé, 1861).

Coleoptera: Bostrichidae: Bostrichinae

***Heterobostrychus brunneus* (Murray, 1867).** Bohemia, Česká Kamenice, “Bonex” [51-5252], x.1964, unspecified wood from India, 1 spec., Verner P. leg., Kocourek F. coll., Zahradník P. det. Introduced species, non-established, detected in the concerned area but neither reproducing nor spreading. Originally widespread in Afrotropical Region, introduced into New Zealand, North America, Egypt and Europe - Belgium, France, Great Britain, Germany, Italy, Poland, Spain (Borowski 2007a; Borowski & Węgrzynowicz 2007). From the Czech Republic only *H. aequalis* (C. O. Waterhouse, 1884) has been still mentioned from Bohemia and Moravia as introduced species, but non-established (Zahradník 2017, 2019). New to the Czech Republic.

***Sinoxylon anale* Lesne, 1897.** Moravia, Prostějov [6568], 11.x.1972, wood boxes with skins from India, 1 spec., Komínek leg., Kocourek F. coll., Zahradník P. det., a Cosmopolitan species (Borowski 2007a; Borowski & Węgrzynowicz 2007). In Europe introduced into Austria, Belgium, Finland, Great Britain, Germany and Poland, but non-established. From the Czech Republic - Bohemia mentioned by Zahradník (2017, 2019). New to Moravia.

Coleoptera: Ptinidae: Dorcatominae

Stagetus pilula (Aubé, 1861). Morocco, Oukaimeden, 31°11'16" S, 007°50'44" W, 29.iv.2015, 1 ♂, 3 ♀♀, Konvička O. leg. et coll., Zahradník P. det. Widespread in central and south Europe, in Algeria and Egypt in North Africa, furthermore in Turkey, Middle East - Syria, Israel and Central Asia - Kazakhstan, Tajikistan (Zahradník 2007). New to Morocco.

Coleoptera: Ptinidae: Dryophilinae

Homophthalmus rugicollis (Mulsant et Rey, 1853). Albania, Palace, 40°10'28"N, 19°35'36"E, 13.v.2018, 1 spec., Habarta J. leg. et coll., Zahradník P. det. South Europe and partly in southern part of central Europe, Turkey (Zahradník 2007). From Balkan Peninsula mentioned from Bosna and Herzegovina, Bulgaria, Croatia, Greece, North Macedonia and Slovenia (Zahradník 2016). New to Albania.

Coleoptera: Ptinidae: Ernobiinae

Ernobius abietis (Fabricius, 1792). Albania, Palace, 40°10'28" N, 19°35'36" E, 13.v.2018, 1 spec., Habarta J. leg. et coll., Zahradník P. det. Europe, Japan, Algeria (Zahradník 2007), in spruce (*Picea* spp.) and pine (*Pinus* spp.) forests (Horion 1961). New to Albania.

Coleoptera: Ptinidae: Mesocoleopodinae

Tricorynus tabaci (Guérin-Ménéville, 1850). Bohemia, České Budějovice [7052], 18.vii.1962, 1 spec., Valešová J. leg., Kocourek F. coll, Zahradník P. det.; Bohemia, České Budějovice [7052], 12.vii.1963, 6 spec. (from tobacco from Cuba), Verner P. leg., Zahradník P. coll. et det.; Slovakia, Rimavská Sobota, SLDV [7686], 7.vii.1963, 11 spec. (from Tobacco), P. Zahradník det., coll. Food Industry Research Institute in Prague. Originally from Central America - Cuba, Guatemala, Mexico, southern part of USA (introduced?). Introduced to some European countries, probably with tobacco products, non-established, detected in the area concerned but neither reproducing nor spreading or only for a very short time in climatic factory halls. In Europe mentioned from Croatia, Denmark, France, Germany and Hungary. Zahradník (2017) mentioned this species from the Czech Republic, but without specific data, whether this is an occurrence from Bohemia or Moravia (Šefrová & Laštůvka, 2005) which were based on the final research report of P. Verner from the Food Industry Research Institute in Prague (unfortunately, this report was not available for me and I did not study it) (Verner et al 1965). However, it is likely that the information in this report is based on the data presented there. For this reason, it is necessary to consider the potential occurrence in Moravia as unconfirmed. The first concrete published record from Bohemia, Czech Republic. New to Slovakia.

ACKNOWLEDGEMENTS. This work was supported by Ministry of Agriculture, institutional support MZE-RO0118. Many thanks to my colleagues and friends for providing of material these species - František Kocourek (Praha), Jan Habarta (Veliká nad Veličkou) and Ondřej Konvička (Zlín), all from the Czech Republic.
