Catalogue, new status, systematics, nomenclature, bibliography, Coleoptera, Nosodendridae

Abstract. An updated version of the world catalogue of the family Nosodendridae is presented, including lists of all known genera, subgenera and species. A new status is proposed: *Nosodendron obtectum* Endrödy-Younga, 1991 stat. nov. from subspecies of *Nosodendron slipinskii obtectum* Endrödy-Younga, 1991.

INTRODUCTION

An updated version of the catalogue of Nosodendridae is provided Háva (2014). The catalogue presents all known species and their distribution (as of September1 2026. The family currently contains six genera and 129 species worldwide.

REMARKS ON THE ARRANGEMENT OF THE CATALOGUE

All the names, years of publications, page numbers and other data included in the catalogue have been carefully checked with the original literature. The names of subfamilies and genera are given as headings; after them, there are type genera (for subfamilies) and type species (for genera), as well as synonyms (also with their type genera and type species). The valid specific name is followed by the name of its author, year of publication and page on which it appeared.

Citations of papers consist of the author´s name and year of the publication. When more than one cited paper has been published in the same year by a given author, then the first one is marked by the addition of the letter a, the second by the letter b, etc.

An alphabetical list of names of species transferred and invalid names, used in the combination with a given generic name or its synonym, is given within each genus after the list of the known species.
