Faunistic new record, interesting findings, Czech Republic, Coleoptera, Bostrichidae, Ptinidae

Abstract. One species from the family Ptinidae is presented as new to Bohemia - *Anobium inexpectatum* Lohse, 1954. Other new and interesting findings for Bohemia and Moravia are listed for another seven species from the family Ptinidae and two species from the family Bostrichidae. From the family Ptinidae *Gastralus vavrai* Zahradník, 2007; *Oligomerus ptilinoides* (Wollaston, 1854); *Dorcatoma (Pilosodorcatoma) ambjoerni* Baranowski, 1985; *D. (P.) androgyna* Büche, 2001; *Stagetus pilula* (Aubé, 1861); *Dryophilus longicollis* (Mulsant et Rey, 1853) and *Ochina (Ochina) ptilinoides* (Marshall, 1802) and from the family Bostrichidae *Heterobostrychus brunneus* (Murray, 1867) and *Sinoxylon anale* Lesne, 1897.

Coleoptera: Bostrichidae

***Heterobostrychus brunneus* (Murray, 1867).** Czech Republic, Bohemia, Stachy u Vimperka (6847), 2.vii.2023, 4 spec., J. Ryšavý leg. et coll., P. Zahradník det. This species is widely distributed in the Afrotropical Region, also introduced with wood to New Zealand, the USA and a number of European countries (Zahradník & Háva 2024). In our territory it is reported from northern Bohemia from Česká Kamenice, found in unspecified wood imported from India (Zahradník 2023). These specimens represent the second find for the Czech Republic, specifically for Bohemia.

***Sinoxylon anale* Lesne, 1897.** Czech Republic, Bohemia, Česká Kamenice (5552), x.1969, P. Verner leg., 1 spec., F. Kocourek coll., P. Zahradník det. Cosmopolitan species, originally from tropical Asia, introduced to all continents and many European countries (Zahradník & Háva 2024). From the Czech Republic, it is reported from northern Bohemia from Nový Bor and from Moravia from Prostějov (Zahradník 2019, 2023). The third find from the Czech Republic, of which the second for Bohemia.

Coleoptera: Ptinidae

***Anobium inexpectatum* Lohse, 1954.** Czech Republic (Bohemia), Týniště nad Orlicí (5862), 15.vii.2008, 2 ♀♀, F. Pavel leg. and coll., P. Zahradník det. Sporadic in southern

Europe and Azerbaijan (Zahradník 2007), but mostly rarely to rare. The only record from the Czech Republic comes from Nový hrádek near Lukov in the Podyjí National Park (Zahradník & Kraus 2007). New species for Bohemia.

***Dorcatoma (Pilosodorcatpma) ambjoerni* Baranowski, 1985.** Czech Republic (Bohemia), Děčín - Jílové (5250), 12.-25.viii.2020, 1 ♂, impact trap, P. Brůha & M. Michalega leg., P. Moravec coll., P. Zahradník det.; Czech Republic (Bohemia), Černé Voděradý (6054), 9.-23.vi.2022, 1 ♂, impact trap, O. Nakládal leg. and coll., P. Zahradník det.; Czech Republic (Bohemia), Lovosice - Ostrov (5450), 26.vi.2019, 3 ♂♂, on light, and 26.vii.2019, 2 ♂♂, P. Brůha leg. and coll., P. Zahradník det.; Czech Republic (Moravia), Březník - Lamberský (6863), 22.vi.2016, 2 ♂♂, O. Konvička leg. and coll., P. Zahradník det.; Czech Republic (Moravia), Buchlovice, PR Holý kopec (6969), 28.ii.2021, 1 ♂, sieving, P. Jáchymek leg. and coll., P. Zahradník det.; Czech Republic (Moravia), Lednice (7166), 13.vi.1992, 10 spec., J. Vávra leg., J. Vávra and P. Zahradník coll., P. Zahradník det.

Species sporadically distributed in central and northern Europe - Czech Republic, Poland, Sweden, Ukraine, Great Britain (Zahradník 2007). In Bohemia, this species is known only from the Lánská obora in the Křivoklátsko Protected Landscape Area (Rébl & Vávra 2023). Zahradník (2017) mentions this species without further information from Moravia. New findings to Bohemia and clarification of findings in Moravia.

***Dorcatoma (Pilosodorcatoma) androgyna* Büche, 2001.** Czech Republic (Bohemia), Nasavrky, PR Strádovské Peklo (6160), 29.vii.2018, 1 ♂, knocking, J. Pelikán leg. and coll., P. Zahradník det. Species sporadically distributed in Central Europe - Austria, Czech Republic, France, Germany (Zahradník 2007). In Bohemia, this species is known still only from Týřovice in the Velká Pleš National nature reserve in the Křivoklátsko region (Zahradník & Zýka 2018). The second find to Bohemia.

***Dryophilus longicollis* (Mulsant et Rey, 1853).** Czech Republic (Bohemia), Hluboká u Žihle (5945), 12.v.2013, 2 spec., S. Benedikt leg., V. Benedikt and P. Zahradník coll., P. Zahradník det.; Czech Republic (Bohemia), Velká u Sedlčan (6351), 3.iv.1999, 1 ♂, 1 ♀, M. Kafka leg. and coll., P. Zahradník det. The species is widely distributed in Europe and North Africa (Zahradník 2007), but is usually characterized as „rarely to rare“. Historical finds from the Czech Republic are known only from Bohemia from three localities: Pacov (Borek et al. 1911, Fleischer 1930), Litomyšl and Milín (Roubal 1914), but the correctness of their determination has not been verified. The only current data is from Sedlčany-Hrazany (Trmal 2008). Two more new localities to Bohemia.

***Gastrallus vavrai* Zahradník, 2007.** Czech Republic (Moravia), Lednice (7166), 3.vi.2017, 1 ♂, A. Peutelschmid leg. and coll., P. Zahradník det. Sporadic in southern and central Europe - Bulgaria, Croatia, Czech Republic, France, Greece, Slovakia, Turkey (Zahradník 2007). In the Czech Republic it is known only from Kladruhy nad Labem - Mošnice in Bohemia and from the National Natural Reserve Křivé jezero near Bulhary in southern Moravia (Zahradník & Bednařík 2022). The second find to Moravia.

Ochina (Ochina) ptinoides (Marshall, 1802). Czech Republic (Moravia), Popice (7065), 30.v.2024, 2 spec., Z. Šeda leg. and coll., P. Zahradník det.; Czech Republic (Bohemia), Opočno (5762), 24.v.2011, 9 spec. And 5.vii.2012, 6 spec., J. Pavlíček leg., J. Pavlíček and P. Zahradník coll., P. Zahradník det. A species distributed in southern and central Europe and in Algeria (? - probably *O. (O.) numidica* Bedel, 1890). In the Czech Republic, this species is reported from two localities in Bohemia - from Pilsen (Zahradník & Háva 2001) and from the Háj Petra Bezruče Nature Reserve near Petrohrad (Benedikt et al. 2021), and one from Moravia - Dolní Dunajovice (Ezer 2026). Other localities of this species from Bohemia and Moravia.

Oligomerus ptilinoides (Wollaston, 1854). Czech Republic (Bohemia), Hrazany (6252), 18.vi.2021, 1 spec., A. Trmal leg. and coll., P. Zahradník det. This widely distributed in Palaearctic (Zahradník 2007) species has been reported from our territory by old data from Bohemia and Moravia (Reitter 1911, Roubal 1929). However, documentary material for these data has not been found (Zahradník 2013), not has the correctness of the identification been revised. Recent data come mainly from western and central Bohemia (Těťál 2015).

Another recent find of this species in Bohemia.

Stagetus pilula (Aubé, 1861). Czech Republic (Moravia), Břeclav - Pohansko-Pajdava (7367), 22.-29.v.2007, 2 ♂♂, 1 ♀, J. Schlaghamerský leg., J. Schlaghamerký and J. Vávra coll., P. Zahradník det.; Czech Republic (Moravia), Pánov u Hodonína (7168), 27.v.2017, 1 ♀, L. Bobot leg. and coll., P. Zahradník det.; Czech Republic (Moravia), Zlín - Obecniny (6772), 30.vi.2019, 1 ♀, E. Ezer leg. and coll., P. Zahradník det. Species widely distributed in Europe, North Africa, the Middle East and Central Asia (Zahradník 2007). In Bohemia, the species was only found on Kohoutov Hill near Skryjí (Bílý & Jelínek 1983). The other specimens represent additional new findings of this species in Moravia.

ACKNOWLEDGEMENTS. My thanks go to my colleagues who lent me or donated the material presented here. My thanks also go to Larry G. Bezark (California, USA) for the comments and English revision to the manuscript. The paper was supported by the Ministry of Agriculture of the Czech Republic institutional support MZE-RO0123.
